ROAD GROOM

Models from 4' to 13'

11' Road Groom Blading Rural Road in Grundy Co., IA

The Road Groom was designed and patented by Tom Winger, Jefferson, Iowa. His 25 years of experience as a county motor grader operator lead him to realize the need for a more affordable alternative in rural road maintenance. This machine, pulled by a 4WD pickup, dump truck or tractor will save fuel, labor and maintenance costs, for counties, municipalities developers and construction companies.

**15-20 MPH Typical
Grading Speeds**

←
"We bought one the first Road Grooms and it has saved us money from the start. We now have two machines. Our Road Grooms cover more miles in a day than three blades or sometimes four."

Max Cox
 Monroe Co. County Engineer
 Albia, Iowa

"We've had our Road Groom about two years and pull it with a pickup. The first time it was used, I took it out myself and did over 100 lane miles in one day. Try that with a blade."

Jerry Strawn
 County Commissioner
 Panhandle, Texas

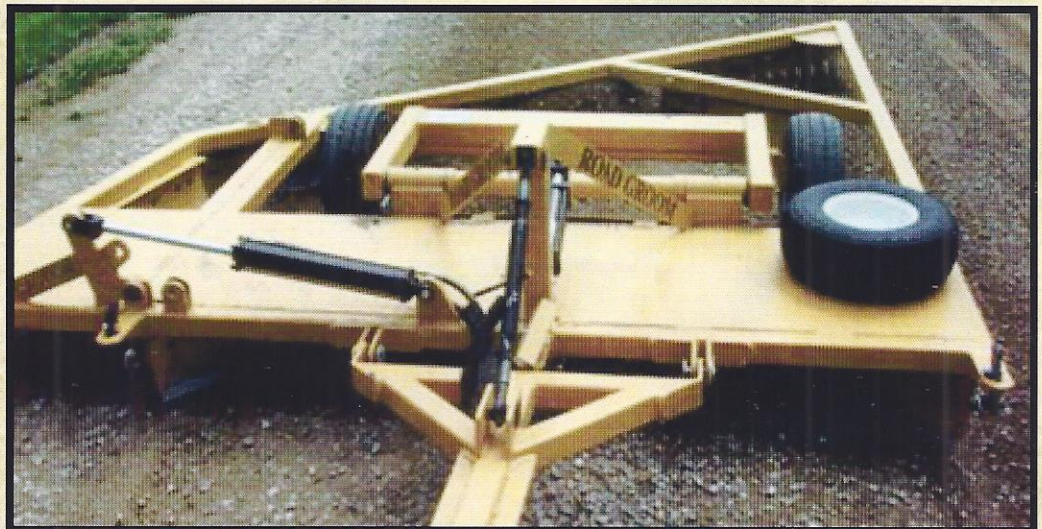

"We have used the Road Grooms for about three years and are very happy with the job they do for us and the savings they gave us. We have some very low traffic roads that haven't had any grading in over two years and the Road Groom roads are the smoothest. Gravel and fuel savings with the Road Groom have been better than we could have ever hoped for. We now have three machines."

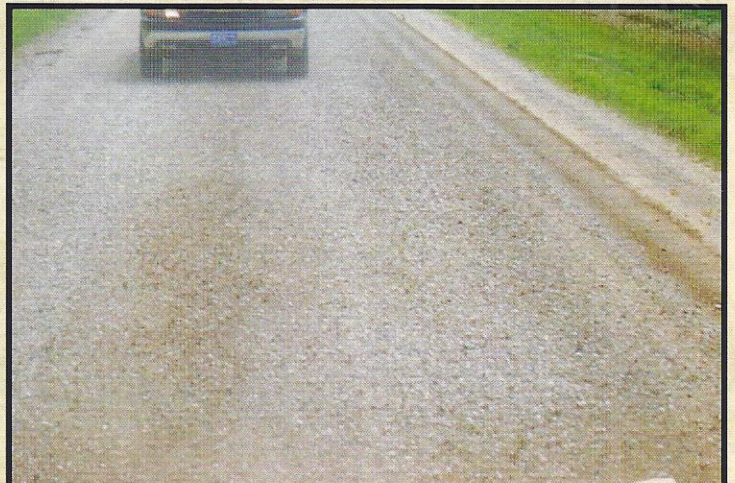

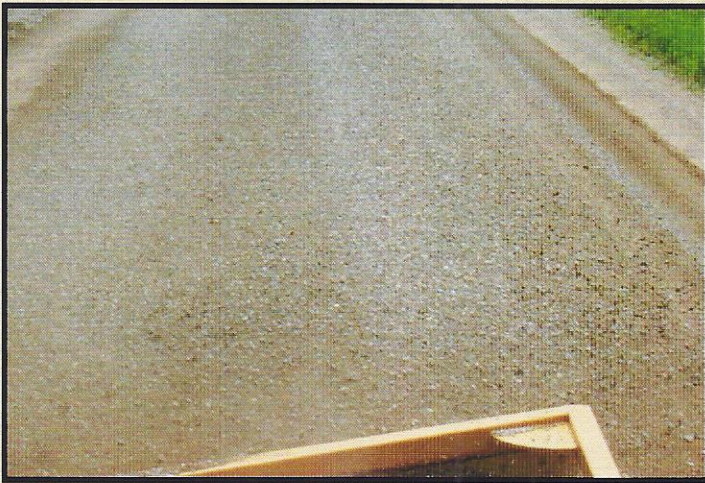

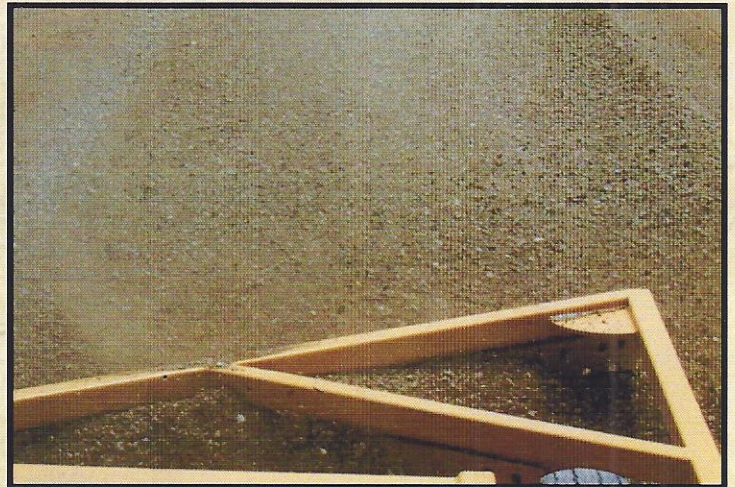

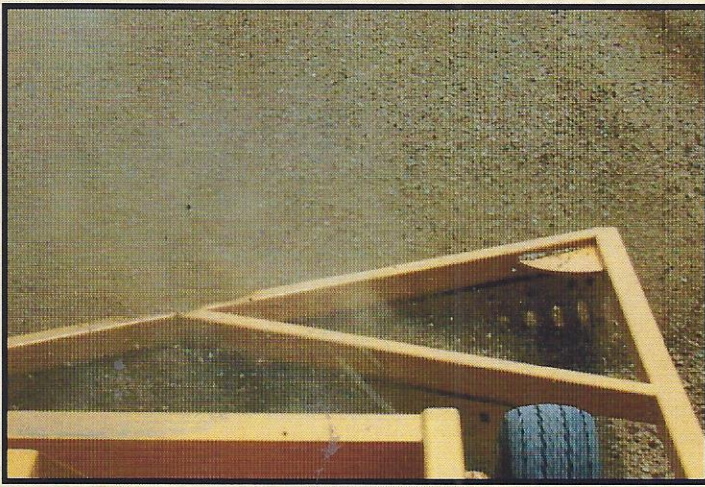

Bob Oliva
 Roads Superintendent
 Phillipsburg, Kansas

Patented cutting angles cut wash board areas and build the center crown.

Wing blade reclaims gravel from the road edges.

Redistribution of aggregate across the road bed—not the ditch.

"This machine works great for me. I keep all my roads in better shape than ever before and do it myself and don't have to hire a blade."

John Varel
Land Developer
Kula, Hawaii

"We have had our Road Groom for over two years and use it a lot. It is by far the most economical and fastest way to keep roads in excellent shape."

Mark Sanders
Noble Co. County Commissioner

"As our county budget gets tighter, we have had to get more done, with less labor. Road Groom has been the answer for us. We not only do a better job of grading and removing washboards, we also get it done faster and with less money."

Ardell Talkington
Webster Co. Highway Dept.
Red Cloud, NE

"The Road Groom works great on my gravel roads. We are high on the job the machines are doing, and the good public relations created by well maintained roads."

John Culbertson
Custer Co. Highway Commissioner
Rapid City, South Dakota
